For Supplemental Educational Services

YouthServices.net for SES for Supplemental Educational Services enables school districts, supplemental service providers and educators to automate the process of recording, billing and evaluating services. Designed as a full-featured web application, the software gives SES stakeholders a common platform for meeting educational objectives outlined by the No Child Left Behind Act.

Manage Administrative Duties

YouthServices.net for SES simplifies the administrative tasks associated with Supplemental Educational Services. The software maintains your approved list of service providers, capturing detailed information on each agency. The system also facilitates communication to those agencies via a shared login screen. The administrative platform makes it easy to add, remove or transfer students. Administrative reports track a variety of metrics such as student enrollment by school of origin, and participants registered versus attending per program site.

Register Students and Staff

The system guides you through the process of registering SES eligible students and program staff. Student and staff registration forms record basic information, such as address, ID number, emergency contacts and learning or medical conditions. Student registration forms also capture detailed information about goals, evaluation criteria, and the timeframe for goal completion. YouthServices.net for SES may be linked to a school districtÍs student registration system.

Enroll Students and Track Attendance

Once students are registered, you can enroll them in services and track their attendance. YouthServices.net for SES ensures that students are served by only one provider at a time. The software enables SES providers to maintain detailed attendance information for each student, including the staff provider, date and duration of service, and subject matter. Attendance patterns can be analyzed by student, SES provider and school site. Student service history may be tracked over time and across providers.

WITH YS SES YOU CAN:

Manage Administrative Duties ✓

Enroll Students & Track Attendance ✓

Register Students and Staff ✓

Automate Billing ✓

Evaluate outcomes ✓

For 21st Century Community Learning Centers

AUTOMATE BILLING

YouthServices.net for SES automates billing procedures by standardizing student budgets and the process of budget draw-down. As providers record student attendance, an online invoice updates in real-time to show per student and per provider costs. Billing statements display fees accrued per participant and outstanding balances.
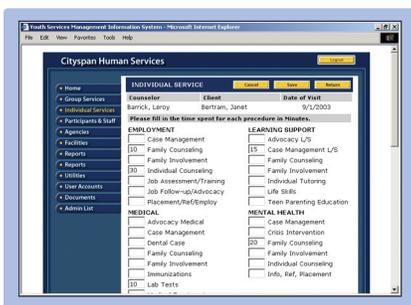

ANALYZE OUTCOMES

The software supports outcomes analysis by accepting student assessment information such as grades, scores, surveys and interview data. Student grades and scores may be entered by the user or uploaded via a link to school district records. By matching participation patterns to district information, SES initiatives can evaluate provider success and guide policy and resource investments.

ABOUT THE TECHNOLOGY

YouthServices.net technology is the product of ten years of sustained development. Our software is implemented using advanced Microsoft web technologies, features an XML configuration layer, and is delivered through a web browser interface. Our servers and network infrastructure are designed for high performance and availability.

ABOUT SECURITY

YouthServices.net maintains the highest levels of system security and client confidentiality. A 128-bit secure socket layer (SSL) protects client-server communications; security professionals configure and audit our production servers; and backups and data-storage protocols incorporate state-of-the-art mirroring and encryption technologies. YouthServices.net actively monitors and enforces HIPPA and FERPA compliance policies that ensure client confidentiality.
